

HelmLogic — Smoke Test Report

Automated smoke battery: application routes, security rules, live catalog, quotes, configuration, release ceremony · 2026-07-03

2,076 CHECKS EXECUTED	2,076 PASSED	0 FAILED	100.00% PASS RATE
--------------------------	-----------------	-------------	----------------------

How this battery works

Every check below ran against the **live system**: the production web build for route checks, and the production Firestore database authenticated as a real operator user for data, security and quote checks. The battery fans out one check per document — every Highfield model, every variant, every quote and every feature card is individually verified, which is why the check count runs into the thousands. Results are machine-generated from the run (test-results/smoke-data.json); nothing in this report is hand-entered.

Results by section

Section	Checks	Pass	Fail	Status
A. App routes Every application route served by a production build of HelmLogic answers HTTP 200, renders the app shell, and shows no error boundary.	60	60	0	PASS
B. Security rules Signed in as the canonical operator user, every operator-facing Firestore collection and collection-group path is readable exactly as the deployed security rules intend.	26	26	0	PASS
C. Catalog Every Highfield range, model and variant in the live catalog is walked one-by-one: names present, variant sell prices positive numbers when set, costs non-negative.	1455	1455	0	PASS
D. Quotes Every quote in the organisation is checked: correct organisation linkage, non-negative totals, lifecycle state within the known state machine.	140	140	0	PASS
E. Org config Exchange rates, fit-up catalog and service catalog entries have well-formed, non-negative pricing fields.	28	28	0	PASS
F. Ceremony Every release flagged shipped has its release notes and user guide present in the repository (drives the in-app Release Notes timeline).	29	29	0	PASS
H. Roadmap Every feature card carries a valid status and no planned story is stranded inside an already-shipped release column.	338	338	0	PASS

Failures

None. Every check in the battery passed.
